

We warmly invite you to this informative dinner presentation

THE IMPORTANCE OF SEAL MOLDABILITY

Creating a secure, unique fit, every time.
#ShapeOfYou

This year we are taking a focussed look at the importance of creating a secure routine for both ostomy and fistula patients, that is manageable in every setting.

Globally, we often encounter cases of a secure routine being established in a hospital setting but when the ostomate or wound patient is discharged home they encounter problems.

In this session we will present global case studies from nurses seeing these problems and why they occur. We will review the information patients encounter during the early days of care, and current products on the market with new testing that showcases the ability of different products to adapt to each unique stoma, fistula or wound.

Join us for an exciting opportunity to hear from the eakin® team from Ireland, engage with other nurses and share your experiences while hearing of new research in this area.
